

Accessibility Audit Report

Document: **High Impact Reports 89-92 App E.pdf**
Date: June 19, 2026
Standards: WCAG 2.1 Level AA • ADA Title II • Section 508 • EN 301 549
Methodology: multi-pass AI self-consistency review + axe-core (Deque) automated verification
Tool: AlloFlow Document Accessibility Pipeline

While the text is visually clear and well-organized for sighted readers, the document presents serious accessibility concerns because it is a flat image scan lacking a searchable text layer, semantic tags, and essential metadata. (5-pass self-consistency, SD: 7.7)

Cross-Pass Agreement Metrics

AI passes: 5 | Individual scores: 15, 13, 28, 28, 28 | SEM: ±3.4 | Range: 15 | Reliability: good

Document Properties

CRITICAL (16) Critical Issues (Before Remediation)

Issue	WCAG	Count
The document lacks a document language attribute required for screen readers to apply the correct pronunciation rules.	3.1.1	
The file metadata does not contain a document title which is necessary for identifying the content in browser tabs and assistive technology.	2.4.2	
The document is composed of scanned image-only pages that do not contain a searchable text layer or alternative text descriptions.	1.1.1	8
There is no defined main landmark or structural container to allow assistive technology users to identify the primary content area.	1.3.1	
The document lacks a defined primary language attribute required for screen readers to identify the correct pronunciation rules.	3.1.1	
The document does not have a descriptive page title in the metadata which is necessary for users to identify the file content.	2.4.2	
The document consists of scanned images of pages without an underlying searchable text layer, making the content invisible to screen readers.	1.4.5	8
The document lacks a main landmark or structural root tag to define the primary content area for assistive technology navigation.	1.3.1	
The document lacks a primary language attribute to identify the content as English for assistive technologies.	3.1.1	
The PDF does not have a descriptive page title defined in the document metadata.	2.4.2	
The document is a scanned image without a searchable text layer, rendering the content invisible to screen readers.	1.1.1	8
The document structure lacks a main landmark to define the primary content area for navigation.	1.3.1	
The document lacks a defined language attribute to specify the primary language of the text for screen readers.	3.1.1	
The document lacks a searchable text layer, which renders the content entirely invisible to screen readers and assistive technology.	1.1.1	8
There is no primary language attribute defined within the document properties to guide screen reader pronunciation.	3.1.1	

Issue	WCAG	Count
The document lacks a descriptive page title in its metadata to identify the document to users upon opening the file.	2.4.2	

SERIOUS (10) Serious Issues (Before Remediation)

Issue	WCAG	Count
The structural tagging lacks a heading hierarchy and does not include a level one heading to establish the document's main subject.	1.3.1	
Data tables such as the comparison box for referral reasons are missing semantic header rows and cell-to-header associations.	1.3.1	
The document lacks a programmatically defined heading hierarchy which prevents users from navigating by sections.	1.3.1	
The data table in Box 5.4 lacks defined header rows and scope attributes to associate data cells with their appropriate column headers.	1.3.1	
The content lacks a level one heading to establish the primary title and document hierarchy.	1.3.1	
The data table in Box 5.4 lacks semantic header rows and scope attributes to associate data cells with their labels.	1.3.1	
Visual headings such as Assessment Procedures are not semantically tagged to establish a logical heading hierarchy.	1.3.1	12
The data table in Box 5.4 lacks structural header row tags and scope attributes to associate columns with data cells.	1.3.1	
The document does not have a tagged heading hierarchy or a level 1 heading, preventing users from navigating the text via structural landmarks.	1.3.1	
The data table comparing referral reasons and background information lacks semantic header rows and scope attributes required for data association.	1.3.1	

MODERATE (5)

Moderate Issues (Before Remediation)

Issue	WCAG	Count
Content formatted as bulleted lists uses standard characters for bullets instead of semantic list markup to communicate list structure.	1.3.1	2
Bulleted content in Box 5.4 and Box 5.5 appears to use visual bullet characters instead of semantic list markup.	1.3.1	2
Content formatted as bulleted points uses visual characters instead of semantic list tags.	1.3.1	2
Bulleted content in the sample questions and outline sections uses visual characters instead of semantic list tags.	1.3.1	4
Content presented as numbered and bulleted lists is not tagged with semantic list elements, which disrupts logical grouping for non-visual users.	1.3.1	2

MINOR (3)

Minor Issues (Before Remediation)

Issue	WCAG	Count
The document metadata is missing required fields for author and subject which hinders file organization and discovery.	2.4.2	
The document metadata is missing information such as the author and subject of the work.	2.4.2	
The document metadata is missing author and subject properties necessary for cataloging and searchability.	1.3.1	

✓ AI Audit — Passing Checks (15)

Checks that passed during the initial AI audit (before remediation)

- ✓ The document uses high-contrast black text on a light background for all body content.
- ✓ Visual section breaks and boxed content provide clear visual organization for sighted users.
- ✓ Text contrast is visually high and legible against the page background
- ✓ Content follows a logical linear flow suitable for reading order remediation
- ✓ Section titles and boxes are clearly demarcated visually
- ✓ Logical visual progression of content
- ✓ Consistent use of bold text for sub-headings
- ✓ Clear separation of instructional text and case examples

- ✓ Text contrast appears high and sufficient for readability against the background.
- ✓ The document uses consistent visual formatting to distinguish different sections of the report outline.
- ✓ The layout provides clear visual separation between the core text and supplemental boxes.
- ✓ Logical visual reading order
- ✓ High visual contrast for most body text
- ✓ Clear visual distinction between headings and body text
- ✓ Use of distinctive boxes to separate supplemental information

After Remediation

Results below reflect the document state after automated remediation and any manual edits.

AI Verification — Remaining Issues (1)

AI re-audit of the remediated HTML for WCAG 2.1 AA compliance

Issue	WCAG	Severity
The data table is missing a caption element to provide a descriptive title for the information presented.	1.3.1	moderate

✓ AI-Verified Accessible Checks (21)

Checks that the AI auditor confirmed are now passing after remediation

- ✓ HEADINGS: The section maintains a logical hierarchy using h2 and h3 elements without skipping levels.
- ✓ CONTRAST: Text color (#000000) against the background meets the 4.5:1 minimum contrast ratio requirement.
- ✓ IMAGES: No images are present in this section, avoiding potential alt-text violations.
- ✓ LINKS: No links are present in this section, avoiding non-descriptive link text issues.
- ✓ LISTS: Semantic
 - and
 - elements are used correctly for the clinical interview questions and the background outline.
- ✓ FORMS: No form inputs are present in this section, avoiding label association issues.
- ✓ LANGUAGE: The global lang attribute check is deferred to section 1 as per instructions.
- ✓ TITLE: The global page title check is deferred to section 1 as per instructions.
- ✓ HTML lang attribute is correctly set
- ✓ Page title is present and descriptive
- ✓ A
 - landmark defines the primary content area
- ✓ Footer landmark is present

- ✓ Level 1 heading (h1) establishes the document topic
- ✓ Section headings (h2) provide document structure
- ✓ Links use descriptive text
- ✓ Semantic list markup (ul/li) is used
- ✓ Table headers (th) are used for data tables
- ✓ Table header scope attributes define data relationships
- ✓ Skip-to-content link is provided for keyboard navigation
- ✓ Form elements have associated labels
- ✓ ARIA landmark roles are used for page structure
